

LEON ZAGOROUIKO

Web Developer

PROFILE

I'm a web developer with past experience in multiple frameworks ranging from Ruby on Rails, Laravel, and most recently .NET Core 3.0. I have a strong understanding of HTML5, CSS, Javascript, and JQuery. A good grasp on RESTful APIs and I'm comfortable working in an agile environment. I'm currently teaching myself Angular so I can become a more well-rounded developer and I feel like I can adapt to any technology stack because I understand the conceptual and architectural fundamental patterns of things like OOP and MVC.

EDUCATION

Epicodus

A hacker school I attended in Portland where I became efficient in problem solving, critical thinking, and learned to collaborate with an array of individuals with from different backgrounds. I became familiar with Ruby, JavaScript, Ruby on Rails. The last month of the term I interned at a Ruby on Rails consulting company and received real world experience

EXPERIENCE

PrintScan – ASP.NET MVC Developer

A New York City based fingerprinting/background screening company where I wore multiple hats. I overhauled, maintained, and kept up with updates of the companies' two MVC sites. I was in charge of Adwords by increasing our conversion, along with keeping track of SEO, and retaining a high ranking on Google. I also worked on a kiosk Windows application for gun shops to take data of the customers who are buying weapons. My main focus was improving face capture/recognition on the webcam when obtaining a photo. My other duties included troubleshooting Azure server issues, analyzing Google analytics and taking proper measures, and QA testing of the apps.

Plusqa – QA Analyst

Tested various apps and sites for large clients like Dropbox and Intel and kept proper documentation for bugs and was prompt with communication with the client throughout the bugs life cycle. I also helped train new employees and lead a few projects by developing test cases and familiarising the testers with the app/site as well as budgeted the correct timeframe for the clients needs.

Picr – PHP/Javascript Developer

A fast paced start-up where I worked in back-end development, doing weekly sprints I developed API end-points and database tables by specification for features such as rating systems, referral systems, and activated zip codes. I solved and documented numerous bugs especially at crucial deployment times in a timely manner. I also wrote node scripts to manage their clients pictures that were stored on AWS S3, such as generating missing sizes, and destroying duplicates. I took it upon myself to transition their API documentation from their dated Dropbox paper-docs to a more automated, manageable, and testable platform using Swagger.io, which helped keep documentation current after every deployment.
